How would I like to re-map/switch volume/- (increase volume for right button, and reduce volume for left button)? Or switch the Home and Mute button because it is closer to the driver's side. TIA October 24, 2018, 02:02 PM No #8 quote: Originally published mine420 Lee atoto a6 Pro has a farical z type GPS connector? The photos look like this, but it's hard to tell. If so, will I be able to use my cars GPS antenna? Yes, ATOTO A6 connectors for both Wi-Fi and GPS are fakra-style connectors, although they are key in different ways. I'm not quite sure what ATOTO keys used for GPS, but I think they used D. This is a reference to various standard fakra keys: If your car's GPS antenna uses the same keys as ATOTO, then you should be good to go. If not, use the ATOTO GPS antenna provided. ----- Post added at 08:56 a.m. ----- The previous post was at 08:47 am ----- quote: Originally published paxie there is any way we can re-map the buttons? How would I like to re-map/switch volume/- (increase volume for right button, and reduce volume for left button)? Or switch the Home and Mute button because it is closer to the driver's side. TIA Yes, there is a way you can reprogram the feature for each of the front physical buttons on the A6 Pro. There is a description on the ATOTO support site (you need an account there to access) for ATOTO supports it. COLOR Silver October 24, 2018, 7:15 p.m. #9 Junior Member More Quote: Originally published as jackhound Yes, there's a way to reprogram the function for each of the front physical buttons on the A6 Pro. There is a description on the ATOTO support site (you need an account there to access) for more information on how to do this. I haven't tried it myself, but it seems ATOTO supports it. COLORSilver Hello thanks for the response. Yes, I joined this support site too, tried that setup, but I believe it to control the steering wheel (if there is any but mine doesn't have SWC. I tried steps to see if it will work with the front button, but it doesn't work. It just keeps the blue highlighted, even I pressed the button I wanted to re-map. Tried a few remapping apps as well, but it didn't work as well. 25 Oct 2018 01:18 01:18 The quote #10: Originally published by Paxie Hi thanks for the response. Yes, I joined this support site too, tried that setup, but I find it to control the steering wheel (if there is any connected), but mine does not have SWC. I tried steps to see if it will work with the front button, but it doesn't work. It just keeps the blue highlighted, even I pressed the button I wanted to re-map. Tried a few remapping apps as well, but it didn't work as well. I tried these instructions and confirm that they don't seem to work on the ATOTO A6 Pro. I have the steering wheel buttons all programmed and working. However, this screen doesn't react when I press the panel button that needs to be displayed (it also doesn't respond if I press one of the steering wheel buttons). I believe the page should be for reprogramming the front keys. So either functionality if broken, or maybe it never worked on the A6 Pro. Sorry for guiding you on something that doesn't work. On October 28, 2018, 02:34 #11 Junior Member Read more about the screen auto-right connected to the ILL wire. In this setup and works very well, it adjusts the brightness of the screen when the headlight is on/off. Do you guys know how this auto brightness works or how it is caused by ILL wires? Planning to use this as an event tasker as well as in relation to Emil's Android Auto Emulator (set day and night mode). BTW, I would recommend that app for everyone who has atoto as it works very well. Page 2 14 November 2018, 03:13 AM No #21 Member Togliatti More quote: Originally published jackhound To control the level of music in reverse, there is an installation for this, although on my A6 Pro this setting does not seem to have any effect. I know that the back signal is connected properly from my car to the ATOTO, because when I switch backwards, the backup camera is activated. For fast charging, my phone (Pixel2) does not switch to fast charging mode, even when connected to a fast charging ATOTO port. My phone does a quick charging at home. Maybe a quick charge doesn't work on the A6 Pro? I see, so I'm not only one, it's kinda good and bad, as I send an email to support the atoto team, hope they have an idea of how to fix it. I didn't actually try that switch going to try today to see if it worked for me. November 15, 2018, 04:46 PM No #22 Junior Member Read More quote: Originally published by Maurizyo85 Thanks for the answer I install Emile head unit rebooted, but when I connect with a usb cable or with Wi-Fi I have a blackscreen.... After a few seconds back to the home screen ... I suppose it's a matter of allowing DPI? Do you have the same problem? Hello maurizyo, this with me, and when I tried to ura Emile. What seems to work for me is closely everything (clearly recent open apps) and does the auto acceleration feature (swipe down from notice). Also, it looks like I had a problem with the usb cable at the time. I used some cheap usb cable from Amazon, but when I tried USB that came from my my Everything is smooth. With Wi-Fi, you need to set up your phone as an access point and connect atoto a6. This works for me, but preferred the cable as it opens as soon as I connect the phone. ----- Post added at 05:46 p.m. ----- The previous post was at 05:43 p.m. ----- Guys, for fast charging, did you try to open a fast charging app installed by default in atoto? You may have to choose a standard vs. fast charging to make the charge work quickly. November 15, 2018, 8:26 p.m. #23 Junior Member More Can I use a USB extension to extend USB in dash? I tried to upload a photo, but I can't yet. I hope I make sense, that's what I'm asking. Thanks Sent from My Pixel 2 via Tapatalk on November 16, 2018, 03:58 p.m. no #24 senior member of Toronto More Will this device go on sale in the store Amazon.ca on Black Friday? November 18, 2018, 02:19 pm -#25 quote: Originally published by CpTChucky Can I use USB extension to extend USB to dash? Of course, you can purchase a USB 3.0 extension like this one, which can then mount a flush or on a dash. I bought one of them and confirmed that it was functioning. I intended to use it to replace the 12v vessel in my car (see the attached photo), but the amount of effort to replace the vessel was too high, so I just routed the ATOTO USB cable into storage. This works for my installation. Attached By Thumbnails November 18, 2018, 05:05 p.m. no #26 quote: Originally published sterod Will this device go on sale in a store Amazon.ca on Black Friday? ATOTO posted a 10% discount code on its facebook page a few days ago. I don't think it's discount live today, but there's something to watch if you plan to buy soon. November 19, 2018, 02:21 #27 Junior Member Read More This is the one I watched. Thank you. November 21, 2018, 12:18 #29 Junior Member More Is there a way to see a backup camera without putting the vehicle in the opposite direction? I can do this on my Pioneer head unit. Sent from my Pixel 2 via Tapatalk on November 21, 2018, 02:42 AM No #30 quote: Originally published by CpTChucky Is There a Way to See Backup not putting the car in the opposite direction? This is possible and described in this post on atOTO Support: Do the A6 allow me to turn on the backup/rear view camera, even if the car is not in reverse gear?. ATOTO does not provide a backup camera power, so you will need to have a camera installed in the so that it feeds even if the car is not in the opposite direction. Most rear camera installations use a powered camera from backup fire, so your rear camera setup will need to use some other circuitry to power the camera. In order to control when ATOTO displays a backup camera, you need to create a circuit that is able to override the reverse transmission of the ATOTO input, so that ATOTO thinks the car is in the opposite direction when it is not. You can also connect the camera to the input of the AUX rather than the RIN input, but this won't work as well in my opinion because the camera will no longer be automatically turned on when the car is shifting backwards. November 24, 2018, 22:09 no #31 Junior member More I bought on a6y2721prb-g, but I have two problems: 1. When I turn on the lighting of the car the brightness of the display does not change, but I activated it in the setting, 2 I use the OnePlus 6 with poweramp to listen to music, but when I activated Bluetooth 1 as well as Bluetooth 2, the sound of music did not come out on the smartphone and on the car. Page 3, October 28, 2018, 02:34 #11 Junior Member Read more about the automatic right of the screen connected to the ILL wire. I have this setup and works very well, it adjusts the brightness of the screen when the headlight is on/off. Do you guys know how this auto brightness works or how it is caused by ILL wires? Planning to use this as an event tasker as well as in relation to Emil's Android Auto Emulator (set day and night mode). BTW, I would recommend that app for everyone who has atoto as it works very well. October 28, 2018, 11:33 p.m. #12 Hi @Paxie. You seem to get a good response from Emil in another topic. From my point of view, the brightness of the ATOTO automatic screen works great, including when you run Android Auto through the head unit Reloaded emulator you mentioned. That is, the Android Auto screen dims well when I turn on the headlights. I don't have any details on how ATOTO implements the ILL feature. November 2, 2018, 07:21 AM No #13 Junior Member Read more November 6, 2018, 07:40 PM No #14 Junior Member More At Atoto 6 pro Bluetooth issue Hello, guys, I have a big problem with Bluetooth dialer when I say well Google voice command, work only for maps and apps, but don't call, don't write messages... I look at the APK interface of Google and native dialer, and I found a tmc dialer ... so this apk doesn't work on this atoto chipset version. Did you fix it? Calling someone with hands for free is basic. In advance thanks November 12, 2018, 07:02 pm no #15 Junior member Read More Quote: Originally published by Maurizyo85 Hi guys, I have a big problem with Bluetooth dialer when I say OK Google voice command, work only for maps and apps, but don't call, don't write messages... I look at the APK interface of Google and native dialer, and I found a tmc dialer ... so this apk doesn't work on this atoto chipset version. Did you fix it? Calling someone with hands for free is basic. Thank you in Hi maurizyo85, I suggest you install a headunit reboot (Android Auto Emulator) Emil for a hands free voice call. I have a google assistant installed on the Atoto A6 too, but all it does is voice command to open apps or search/navigation. I even have an Atoto steering wheel control installed, but it has a simple functionality: - media next/prev (don't even have a play/pause) - end and button response (but there will be no way to at least feature re-dial the previous call) - volume up/down - voice command qit/spotify/gt; (I have it assigned triggers to Google Assistant, but no beep to determine that the assistant is activated). Again, I have it useful for opening an app like playing my private zflzgt;on or moving on to the nearest gas station. I have to work as well on my smart devices at home, like turn on my living room lights. Again there is no voice command or hands free calls. Edit: Hands-free/Remote Mic Button call works as long as Atoto isn't connected to the Internet, so either you give up the Internet at Atoto to get a voice call or internet access without it. So I ended up using Emil Headunit to reboot to launch Android Auto, and it works great with the voice command: - Call someone like Ok Google, call home - Ok Google Smart Device turn on the dining room - move OK Google to go to the nearest gas station So far that the 3 above are most used for me, so I'll end up with Android Auto. Hope helps. November 13, 2018, 01:30 #16 I am second @Maurizyo85 offer to use Android Auto for hands for free on Bluetooth. The ATOTO A6 Pro is a good device, but I think using Android Auto is a much better experience than using ATOTO apps for hands free calling and playing music. I also use The Emil Head Unit Reboot, which works well. In addition to what has already been listed, these are a few of my other regular driving commands: Good Google, Play Insert Your Favorite Artist Ok Google, Send a text message to insert your contact name OK Google, Set a reminder to insert anything and when OK Google, Listen to the news November 13, 2018, 03:36 PM #17 Member Togliatti More Yo, and I have 2 problems, first of all when I put in reverse music to continue playing the same. My old bs mms that was stock had a lowering sound feature. And my second problem is the fast charging idk why, but it doesn't work for me, but I have a 2a cable, and when I try with the charger at home it does a fast charging on November 13, 2018, 05:54 PM #18 Junior Member Read More Quote: Originally published by Paxie Hiiz mauryo85, I suggest you install reboot (Android Auto Emulator) Emil for hands is a free voice call. November 25, 2018, 01:31 #32 quote: Originally published by REDUTOPIAxd1 1. When I turn on the lighting of the car the brightness of the display does not change, but I activated it in the setting. ATOTO A6 Pro lighting management works great for me. ATOTO requires 12v on the wire Orange Dimmer / Lighting when your car lights are turned on and this will cause the ATOTO brightness of the display to dim. Since this doesn't work for you, I would suggest you check your wiring and confirm that your car provides a no 12v signal to the ATOTO dimmer wire when your car lights are turned on. Some vehicles have multiple lighting wires (such as Subaru), and it is important to connect the correct vehicle wire to the ATOTO. The quote: Originally published by REDUTOPIAxd2 I use OnePlus 6 with poweramp to listen to music, but when I activated Bluetooth 1 as well as Bluetooth 2, the sound of music did not go out on the smartphone and on the car. I'm not sure I understand. Audio playback over Bluetooth works great for me. I think you're saying that bluetooth audio playback doesn't work. Does Bluetooth work for phone calls without hands? As far as I know, the ATOTO Bluetooth2 connection is strictly for data transmission, so you only have to connect to Bluetooth1 for streaming audio and hands-free communication. November 25, 2018, 06:10 #33 Junior member More You have to do a parking brake bypass to watch the video while the vehicle is in motion, as you should with the pioneer head unit? I have a basic PH-1 running Android 9. 1. How can I get HU to take a USB or Bluetooth tethering? I turn on one on my phone but HU still has no internet access. 2. Is there an Android audio player app that has touch gesture/swipe controls similar to video playback controls with VLC? (e.g., swipe up to increase the volume) 3. Is there a way to customize the crossover settings for the front and rear cockpit speakers? Are the frequencies listed in LPF subwoofer frequency? This can help with your music app and the swipes you're looking for Thank you in advance. To get BT to the auto tether I can have a solution, but only for Android 1, install the bluetooth tethering manager on both HU and phone set it up on both HU and the phone using the wizard in the app Now normal this should be enough, but I think what happens HU shuts down all apps when it's shut down, so when HU is powered up again, the app needs to manually restart, which isn't what we want. 2, install BT automatic connection and it's too and install them both (not sure what you need both, but I have them both installed), again I think HU turns them off when it's off. So now we have to try to stop HU turning these apps, and I think it's done by optimizing Battery 3, The Settings of the apps and the gear icon top right of the battery optimization zgt; and then select the apps that you don't want to be optimized (all of them BT above). I think it might help, but I'm still testing it at the moment and sometimes it may take some time for BT tethering to connect, but try it and report it if you could see if it helps ----- Post added at 01:46 PM ----- Previous post was at 01:35 PM ----- quote: Originally published as I just bought and installed A6Y2721PR and I have a few questions. I have a basic PH-1 running Android 9. 2. Is there an Android audio player app that has touch gesture/swipe controls similar to video playback controls with VLC? Thank you in advance. This can do the job December 26, 2018, 06:48 PM No #55 Senior Member More Quote: Originally published kevday100 To get BT for automatic tether I may have a solution, but only for Android 1, install Bluetooth tethering manager on both HU and phone set it up on both HU and phone Wizards in the app Now normal this should be enough, but I think HU happens to shut down all apps when it's shut down, so when HU is powered up again, the app needs to manually restart, which isn't what we want. 2, install BT auto car and it's too and install them both (not sure what you need both, but I have them both installed), again I think HU turns them off when it's off. So now we have to try to stop HU turning these apps, and I think it's done by optimizing Battery 3, The Settings of the apps and the gear icon top right of the battery optimization zgt; and then select the apps that you don't want to be optimized (all of them BT above). I think it might help, but I'm still testing it at the moment and sometimes it might take some time for BT tethering to connect, but try it out and report back if you could see if it helps ----- Post added at 01:46pm ----- Previous post was at 01:35pm ----- it might make the job you, sir, are awesome. Thank you very much. It's just so weird that they advertise BT tethering yet rely on 3rd hand software for it and don't give any suggestions. Well give it a go first to make sure it works for you..... when I had my installation Nexus7, the BT tethering manager was all I needed, because when the IGN was off, the N7 didn't turn off the tethering manager on the Nexus, but I'm sure he does it here on the A6 through battery optimization... but I still needed to have another two apps (although just one of them may only be needed) to get it to start tethering without my intervention, as I say I am still in testing at the moment and it may still not work as it should, but so far so good... Yes crazy they don't let BT tethering take place automatically, please report back after you have checked it out and hopefully will work fine for you.. if not, we will have to fin another solution. December 28, 2018, 02:33 #57 junior member Read More Hey All, quick question. Try installing the Atoto A6Y2710SB, and can't get an internet connection to work via Wi-Fi or BT tethering. If I park the car right next to my window - with Wi-Fi fully running on my phone - it connects to Wi-Fi but doesn't show any level connectivity on the Wi-Fi icon, and won't connect via any app (says no network). So I disable Wi-Fi and BT tether on my phone, and the same thing happens - there is no network. To fix the problem, I turned off the Wi-Fi on my phone (so I used the data) and then Wi-Fi on my laptop, plugged laptop through BT tethering to my phone, and viewing is only fine. Still nothing on my Atoto. So I looked at my firmware. 9.4.3. It seems good, but I plant reset, try all the above solutions ... nothing works. I download the new firmware update.zip on USB, update the firmware from scratch, wait 20 minutes to finish and then try the BT tether... No. Wifi... No. The same exact problem. Still, nothing on my Atoto. So I looked at my firmware. 9.4.3. It seems good, but I plant reset, try all the above solutions ... nothing works. I download the new firmware update.zip on USB, update the firmware from scratch, wait 20 minutes to finish and then try the BT tether... No. Wifi... No. The same exact problem. Then, to see if it's a wi-fi antenna problem, I disconnect that from the block and Wi-Fi now has another bug - which means the antenna is working. (And the antenna took a ton of Wi-Fi signals from the surrounding area, so it clearly works. I can connect my Atoto to bt my phone by tethering or Wi-Fi connecting my apartment. Under none of these connections can I access the internet from Atoto, although I can with a laptop surfing through the same BT tether connection on my phone. It seems as if something about network functionality in stereo is just... Not good. Am I missing something? Is there any network screen or security feature that I just don't know about? Any decisions are welcome. Thank you! Just check the date and time set correctly, I've had it a few times when the stereo date and time doesn't change to the right time zone and it doesn't make a connection error. December 28, 2018, 01:52 PM No #59 Junior Member Read More Quote: Originally kevday100 Just check the date and the time set correctly, I had it this times when the stereo date and time does not change in the right time zone, and it does not get a connection error. It looked like a great solution that would solve all my problems... but it doesn't seem to work. I manually changed the correct time zone and time and it didn't help. I tried to use GPS time and it didn't change anything (didn't change the time). In fact, when I download Google Maps it doesn't even show the default map... but when I run the GPS Check app to make sure that GPS detects it has a signal, shows where I am in the world, etc. also if I go to the screen settings with network status, there is nothing under the IP address when I connected to Wi-Fi, BT tethering, or USB tethering. There is a MAC address and a BT address. And, I hooked up between my phone and face to see if I could USB share ... there is also no network. If it was a computer, I would say remove all network adapters and all nuke network code and reinstall everything ... but I did it with a factory reset and network settings reset, and it didn't make any difference. It's like there's a handshake that works (either with BT or Wi-Fi), but after that point, there's no connection. I'm stumped! January 7, 2019, 03:03 p.m. #60 junior member More than anyone tried a recent update? I'm confused with the 2nd link (MCU) on how it will be used. We have just released the newest firmware update OS9.5.1 MCU, you can download the update file on the SD card (format in FAT32 or NTFS, you will need to delete the previous update file to avoid further trouble) : OS9.5.1: 8 January 2019, 01:17 #61 AM In particular, playing with Spotify on my phone via Bluetooth1. The quote: Originally published by Paxie has anyone tried the recent update? I'm confused with the 2nd link (MCU) on how it will be used. We have just released the newest firmware update OS9.5.1 MCU, you can download the update file on the SD card (format in FAT32 or NTFS, you will need to delete the previous update file to avoid further trouble) : OS9.5.1: I tried it out and seemed to be working, but my assembly number has not changed. I have no idea what I did wrong. I think the MCU link is just for the numbers models with Y in them as a Pro. I'm just installing a file from the first link and it worked. I don't know what an MCU file is or how to install it. Page 6 December 2, 2018, 03:19 SCHA (#41 senior member of Toronto More Does this device overheating issues like other android head blocks? I bought one and will get it next week. :52pm #42 I had my A6 Pro A6Y2721PRB for 4 months and had no overheating problems - the system was very stable without one unexpected reboot or freezing system. on the XDA forums, no ATOTO forums about Questions. If you decide to open it, please take some pictures of the internal organs. December 6, 2018, 02:52 #43 Junior member More Use Android Auto should you use the Atoto USB key or can you just install the app on the head unit? Sent from my Pixel 2 via Tapatalk on December 6, 2018, 02:57 am No #44 quote: Originally published by CpTChucky To use android auto should you use The Atoto USB key or can you just install the app on the head unit? You don't need a key. You install Android Auto on your phone and head unit Reloaded App on ATOTO. December 6, 2018, 08:46 #45 Junior Member Read Hello All! I followed the instructions. I have Outlander 2015 and ATOTO Pro A6. After setting up the AWSC-1, only two buttons on the steering wheel work in the mapping panel (Volume and Skip right) no other wheel button has recognized ATOTO I have tried to swap the wires from the male socket connected to the steering key and key without luck. Has anyone encountered the same problem? Thank you (I also posted a thread quoted above. sorry if I shouldn't have) December 10, 2018, 05:51 PM No #46 Senior member of Toronto More Internal Photos Here are some photos that I took that are internal A6Y2721PRB. I did this to see if any active cooling would be needed, but this CPU area is completely sealed. Attached by Thumbnails December 18, 2018, 05:26 p.m. #47 senior member of Toronto More I'm pleased to report that this head unit has a proper job, DUAL BLUETOOTH, which allows you to connect to BT Dongles, such as those used by anti-laser/radar applications such as AL Priority. The only head unit that had this job properly before the Atoto A6 was the NewsMy NR/NU3000 series, which is now very outdated. For reference, none of the PX5/Cortex/Intel Sophia I tested it works. Thank you Atoto for releasing a proper, working product! December 20, 2018, 21:49 #48 junior member of More Hi, I hope it wasn't suggested before (I tried searching this thread for tasker and automating), but someone got one of these apps running on atoto units - seemingly a service/background process for him to kill on sleep, and it's not relaunched by the device - I try to make it always open Bluetooth music, then waze on every startup. December 21, 2018, 23:09 #49 junior participant More Dash Cam Hi, when a dash cam fills an SD card, what happens? does the stereo tell you it's full, or is it just a loop of recording over the oldest data? Also, how many hours of footage is placed on the SD card that comes with the device.? Thanks December 22, 2018, 08:39 a.m. #50 OP Recognized Contributor South Dakota Donate Me More Quote: Originally published by Claude.S Hello when Camera fills SD cards, what's going on? does the stereo tell you it's full, or is it just a loop of recording over the oldest data? Also, how many hours of footage is placed on the SD card that comes with the device.? Thanks He records over depends on the quality of the video.
